Week**

# Who is Involved in the Public Health Genetics System?

The public health genetics system is comprised of stakeholders and organizations. Working together, stakeholders and organizations provide necessary public health genetics functions (such as newborn screening, education about genetic conditions, public health screening).

## Stakeholders

**Individuals and  
Families**

**Healthcare  
Providers**

**Public Health  
Professionals**

## Organizations

**Education Programs**

**Family Support Organizations**

**Federally Funded Programs**

**Governmental Agencies**

**Non-Profits**

**State Public Health Genetics  
Programs**
